HerinneringApp

Set up and manage reminders and stop alarms — step by step

For Android smartphones and tablets | Jeffrey Haimé

App version shown in original screenshots: 1.0 (build 1) | 17 October 2026

Screenshots retain the original Dutch interface; labels in your language may differ.

12. Quick reference and limitations

1. What does HerinneringApp do?

Schedule a reminder for a specific date and time or for selected weekdays. When the alarm sounds, the app can play a sound, speak a message or do both. The large STOP button ends the active alarm.

Use it for appointments, everyday tasks or medication reminders. A phone app is not a guaranteed warning system for critical medical or safety alerts.

2. First launch and permissions

Open HerinneringApp from its app icon. Android may ask for notification or alarm permissions. The exact wording depends on the Android version.

If you see a warning that full-screen alarms are not allowed, tap Open settings, find the full-screen notification/alarm permission for the app, enable it if offered, and return to HerinneringApp.

Create a test reminder a few minutes ahead and verify that the alarm appears. Notification permissions, exact alarms, volume, Do Not Disturb and battery restrictions can also affect alarms.

Figure 1 — Original Dutch app screenshot

3. Home screen

The title Herinnering appears at the top. Tap the large blue plus (+) button to add a reminder. The gear icon at the top right opens About this app, not a general settings menu.

When there are no reminders, the screen displays a no-reminders message. If reminders exist but no active upcoming alarm is scheduled, it can show No active reminder. When an alarm is upcoming, a countdown is displayed.

Figure 2 — Original Dutch app screenshot

4. Create a new reminder

Tap the blue + button to open New reminder. Set the hour and minute. For a one-time reminder, choose a date using the calendar icon. For a recurring reminder, select the required weekdays.

Enter a clear name under Reminder name. Enable Sound, Speech or both. If Speech is enabled, enter the Spoken text.

Choose Repeat, review the details and tap Save. Cancel or the close icon exits without saving the new reminder.

Figure 3 — Original Dutch app screenshot

5. One-time or weekly reminders

For a one-time event, select its date and time. The overview labels this as One-time.

For a recurring reminder, select the required weekdays, such as Monday to Friday or every day. After saving, check the date or weekdays and the next alarm time.

6. Sound, speech and repetition

Sound enables the alarm tone. The original screenshots show Default (Morning Xylophone). Speech enables Android text-to-speech for the message entered under Spoken text.

Choose sound only, speech only or both. Android text-to-speech must work on the device. The original screenshots do not establish how to select a different alarm tone.

Repeat offers five choices: once, three times, five times, seven times or until manually stopped. The developer confirmed a two-second interval between repeated alarm and speech cycles; device behavior may affect exact timing.

Figure 4 — Original Dutch app screenshot

7. View and manage reminders

Saved reminders appear as cards showing the time, name, schedule and alarm functions. Use the switch on the right to disable or enable a reminder. Use the trash icon only when you want to delete it; check any confirmation prompt.

Check the next active alarm at the top. The example screenshots show two reminders at 18:48, one with sound and speech repeated three times and another with sound repeated once. Editing an existing reminder is not conclusively documented.

Figure 5 — Original Dutch app screenshot

8. When an alarm sounds

A dark-red alarm screen appears with a bell icon, time, reminder name and a large light-colored STOP button. Read the reminder and tap STOP to end the active alarm. Return to the overview if needed.

The alarm screen adapts to portrait and landscape orientation. The STOP button remains prominent.

9. About this app

Tap the gear icon on the home screen. About this app shows the developer Jeffrey Haimé, version 1.0 (build 1) in the original screenshots, and copyright information.

Expandable topics include About Herinnering, Privacy, Important usage information, Notifications and alarms, No warranty, Liability, Intellectual property, Changes and Contact. Open-source licences are also listed.

Use the arrow to expand a topic and the back arrow to return.

10. Practical examples

Appointment: create a reminder called Appointment for the correct date at 14:30, enable Sound and save. Check the schedule.

Daily reminder: set 09:00, select all seven weekdays, enter a clear name and enable Sound, Speech or both.

Spoken message: create Water the plants, enable Speech and enter Do not forget to water the plants. Optionally enable Sound and repetition.

11. Common problems

Full-screen alarm does not appear: check Android full-screen alarm permission.

No sound: check Sound, media/alarm volume, silent mode and Do Not Disturb.

No speech: check Speech, the entered text and Android text-to-speech settings.

Alarm does not sound: check date, time, weekdays, the card switch and notification/alarm permissions.

Alarm delayed: check Android battery restrictions and test again.

Alarm repeats: review Repeat and tap STOP.

Important: test important reminders again after Android or app updates.

12. Quick reference and limitations

New reminder: blue + → set time and schedule → Save. Temporarily disable: switch on the card. Delete: trash icon. Repeat: New reminder → Repeat. Stop alarm: STOP on the red screen. Privacy: gear → About this app.

Documentation limit: the original screenshots do not show complete steps for editing an existing reminder, selecting a different alarm tone, exporting/importing data or opening a separate general settings screen. These are not presented as verified procedures.
